

Kathy Lynn Fields was born in 1965 and raised in the rural farm community of Cable, Ohio. Having the influence of her father who was a business owner and a farmer, she was raised to notice and appreciate “God’s Country” and everything associated with its natural beauty. From the age of 4, Kathy was introduced to the appreciation of music and was taught to play the piano. Her daily regimen became music and visual art projects sometimes exhausting days on single projects to achieve perfect realism. By the age of 10, her passion naturally drifted towards illustrating.

Recognizing an inherent visual gift, Kathy’s interest remained focused around art and illustrating. She was one of the youngest to complete a 2 year, John P. Ludlum Fine Art Course and went on to receive her college degree in Commercial Art from Clark State College in Ohio. She immediately went to work in the fields of desktop publishing, digital pre-press, and full color printing. In the late 1980s Kathy was discovered by a decorated marketing firm and was privileged to learn the national level of advertising and marketing.

In the early 90’s, Ms. Fields relocated to North Carolina with her family. She then opened her own upscale advertising & design firm focusing on commercial illustration and digital design. Seaway Advertising and Design Studio continues its success today, boasting clients from small boutiques to national hotel chains and large commercial marketing accounts. Kathy has earned numerous awards for her work, ranging from local to international merits, while still perusing her illustrative desire to achieve artistic works beyond comparison. Today, she resides on a horse farm in North Carolina, illustrating and designing with such detail and remarkable depth far beyond a teachable ability.

*“I illustrate what I am gifted to see and feel... compassion, beauty and precision. That's just a small portion of how God designed the world around us and for some reason, He has allowed me to see and duplicate His presence.”*

~ Kathy Lynn Fields
